What the moderator page is for

Three jobs. The current page has the pieces, but they are stacked as forms and do not yet protect a finished file.

01

User access

Needed

Accept a person. Set designation and what they can open.

Gap now

Queue and directory exist. No moderator mark, no suspend, no record of who accepted.

02

Approval flow

Needed

Own the route for CE, RCE, and inspection.

Gap now

Routes exist. A step is a level, not a person. A change can touch a file already in approval.

03

Document control

Needed

Edit the printed header, footer, company, and logo.

Gap now

Fields exist. One letterhead for all three forms. A later edit can reprint an old submitted file.

Masterlist and formula stay as separate tools. They are not the moderator's three jobs.

ADMIN · 2 / 3

Cleaner layout, same three jobs

One row of sections. Each section is a table, not a stack of empty fields.

User access | Approval flow | Document control

Pending · 2

Set designation and level, then accept. Reject needs a reason.

Name	Designation	Level	Requested	
Maria Santos	Sales Representative	Staff	14 Sep 2026	Accept Reject
Jon Reyes	Cost Estimator	Staff	15 Sep 2026	Accept Reject

Directory

Designation is the title on paper. Level is what they can open. Moderator is the owner.

Name	Designation	Level	Status	
Administrator	System owner	**Moderator**	Active	Cannot remove the last moderator.
Ana Cruz	Cost Estimator	Staff	Active	Edit access

ADMIN · 3 / 3

Document control keeps the old format

Edit the live format here. A submitted file keeps the format it was closed on.

Cost estimate | RCE | Inspection

Live format · Rev 1.1

Draft. Not on new files until you release it.

Header right
Rev {rev} | {date} | {docNo}

Logo

CD

Release Rev 1.1

What a finished file keeps

File	Closed on	Reprint uses
CE-2026-014	Rev 1.0	**Rev 1.0**
CE-2026-041	still open	**Rev 1.1 when released**

Releasing Rev 1.1 does not redraw CE-2026-014.

Company name, code, and logo follow the same rule: new files take the release, closed files keep theirs.

RCE and inspection have their own release.

Do this after the estimate flow is stable. The page can look cleaner before the format is frozen.
